

# THE CONTINENTAL SERVERY SYSTEM

The Continental Servery System is made from high quality stainless steel with a selection of wood veneer or coloured lacquer decorative finishes. It is suitable for canteens, restaurants, hotels and all kinds of fast food outlets.

Food can be dispensed in G/N bowls or non-standard containers, using a range of heated, chilled and ambient display cases. These can be matched to base units with under storage and linked to working counters, corner units and other special modules.

To help you to create your individual scheme, Breezecool offers an online planning service. Simply send us the dimensions of your service area, together with your servery requirements, by fax or email. We will produce a design and written quotation to fit your establishment's needs.
